BRING A BREATH OF FRESH AIR INTO YOUR LIFE

Today we are all too aware of outside pollution, how unpleasant it can be and the effects it can have on our health. Even indoor our air is rarely free of one type of odour or another – cigarette smoke, cooking smells etc.

So imagine what it would be like to step into your home and experience really clean, fresh air. Such pure air is usually only something we get to enjoy following a thunderstorm or a visit to the coast. But advances in technology have now made it possible for us to recreate this effect in your own home, thanks to the power of OZONE.

WHAT IS OZONE?

Ozone is created from the air we breathe. It is also known as “activated” oxygen and is probably the most powerful and effective natural cleansing agent known to man. It is produced by bringing air into contact with a high voltage electrical discharge created naturally in the atmosphere during an electrical storm. What’s more, being gaseous, you will find that Ozone can penetrate even the most inaccessible nooks and crannies.

HOW DOES OZONE WORK?

Instead of just masking unwanted odours, Ozone has the ability to eradicate odours by breaking down the biological structure of the bacteria that causes them. Because it is created naturally within the environment, Ozone quickly and safely reverts back to oxygen leaving no harmful residuals.

Our generators can distribute Ozone into your living areas, bedrooms and toilet, and are capable of eliminating unwanted odours caused by cooking, pets, and cigarette smoke, Ozone provides clean, fresh air within your home at all times.

Ozone has been used successfully for many years, but only recently have advances in technology enabled the distribution of this sanitising gas into your personal and working environment as well.

For further information about our range of Ozone generating equipment please contact us direct our advisors will be pleased to assist.

Envirorental (Products) Ltd Ozone Generators

Are used in homes, apartments and small businesses throughout the United Kingdom...

- Homes
- Laundry areas
- Water damaged properties
- Odour clean-up
- Working/sleeping areas
